IV Semester, MBA (Batch: 2021-23)

REPORT ON VALUE ADDED SESSION

EVENT NAME: 'A TALK ON AI TECHNOLOGY, TRENDS AND APPLICATIONS'

Date and time: Wednesday, June 21, 2023, 09.30 pm to 11.40 pm

Targeted audience: IV Semester MBA students & Faculty members

Resource Person: Dr. Manjunath T K, Professor & HOD, AIDS - KSSEM

Venue: 513A 5th Floor, A-Block, KSSEM

Event Coordinator: Arundathi K L

INTRODUCTION

Artificial Intelligence (AI) technology is an interdisciplinary field that focuses on creating intelligent machines or systems that can perform tasks that typically require human intelligence. AI aims to simulate human intelligence and behavior in computers, enabling them to learn, reason, perceive, and interact with the environment, similar to how humans do.

Data science is a multidisciplinary field that combines elements of statistics, mathematics, computer science, and domain expertise to extract meaningful insights and knowledge from data. It involves the collection, cleaning, and analysis of large volumes of data to uncover patterns, trends, and relationships that can inform decision-making and solve complex problems.

AI TECHNOLOGY TRENDS

- The latest trends in AI technology that were discussed in the talk. This could include advancements in machine learning, natural language processing, computer vision, robotics, etc.
- Discussed emerging AI techniques or technologies that are gaining attention in research and industry.

Machine Learning

Described the role of machine learning in AI. It is a subset of AI that enables systems to improve their performance on a specific task through experience and data without being explicitly programmed.

Deep Learning

Deep learning is a subfield of artificial intelligence (AI) that focuses on training artificial neural networks to learn from and make predictions or decisions based on large amounts of data.

Difference between google and chatgpt

Google is a multinational technology company that offers a wide range of products and services. It is primarily known for its search engine, which allows users to search for information on the internet.

Whereas,

ChatGPT is an AI language model designed to process and generate human-like text based on natural language conversations.
