

A. Industry supported laboratories

The Department of Civil Engineering has proudly established the "**Centre of Excellence for Sustainable Construction Practices and Materials**" in collaboration with **UltraTech Cement Limited**, marking a significant step towards fostering industry-academia interaction. Inaugurated on 25th March 2024, this centre aims to bridge the gap between theoretical knowledge and practical application by creating a platform for students to engage with industry experts, cutting-edge technologies, and innovative construction practices. Focused on sustainability, the centre will provide opportunities for students and professionals to explore advanced materials, techniques, and solutions that address the challenges of modern construction. This collaboration not only enhances the learning experience but also equips future engineers with the skills and knowledge required to contribute effectively to the construction industry while promoting environmentally responsible practices.
